

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/901,563

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): In a receiver for receiving digital broadcasts of a plurality of ensembles ~~and one ensemble~~ including a plurality of services, a digital broadcast receiving apparatus which performs at least one of a search operation and a preset operation for a receivable service, comprising:

an error rate detecting part for detecting an error rate ~~of~~at its reception of each of said services; and

an error rate comparing part for comparing ~~a value the detected by said~~ error rate ~~detecting part~~ with a predetermined reference value;

wherein at least one of said search operation and said preset operation is performed, based on ~~a compared the comparison~~ result by said error rate comparing part, for ~~said~~ services belonging to ~~said ensembles~~ an ensemble containing a service with a low error rate which satisfies said predetermined reference value.

2. (currently amended): In a receiver for receiving digital broadcasts of a plurality of ensembles ~~and one ensemble each~~ including a plurality of services, a digital broadcast receiving apparatus which performs at least one of a search operation and a preset operation for a receivable service, comprising:

an error rate detecting part for detecting an error rate ~~of~~at its reception of each of said services; and

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/901,563

an error rate comparing part for comparing ~~values detected by said error rate detecting~~
~~part~~ the detected error rates for services ~~contained in each ensemble~~ with each other;
wherein at least one of said search operation and said preset operation is performed,
based on ~~a compared-the comparison~~ result by said error rate comparing part, while a higher
priority for the operation being assigned to one or more services belonging to an ensemble
containing a service with a lower error rate, than one or more services belonging to an ensemble
containing a service with a higher error rate.

3. (currently amended): A digital broadcast receiving apparatus according to claim 1,
wherein said error rate detecting part detects an error rate of at least one of said services
contained in ~~said ensembles containing a receivable service~~ each ensemble.

4. (currently amended): A digital broadcast receiving apparatus according to claim 2,
wherein said error rate detecting part detects an error rate of at least one of said services
contained in ~~said ensembles containing a receivable service~~ each ensemble.

5. (currently amended): In a receiver for receiving digital broadcasts of a plurality of
ensembles ~~and one ensemble each~~ including a plurality of services, a digital broadcast receiving
apparatus which performs at least one of a search operation and a preset operation for a
receivable service, comprising:

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/901,563

a reception level detecting part for detecting a reception level of at its reception of each of said services; and

a reception level comparing part for comparing a value the detected by said reception level ~~detecting part~~ with a predetermined reference value;

wherein at least one of said search operation and said preset operation is performed, based on a ~~compared~~the comparison result by said reception level comparing part, for said services belonging to said ensembles containing a service with a high reception level which ~~satisfies~~exceeds said predetermined reference value.

6. (currently amended): In a receiver for receiving digital broadcasts of a plurality of ensembles and ~~one ensemble~~ each including a plurality of services, a digital broadcast receiving apparatus which performs at least one of a search operation and a preset operation for a receivable service, comprising:

a reception level detecting part for detecting a reception level of at its reception of each of said services; and

a reception level comparing part for comparing values the detected by said reception level ~~levels detecting part~~ for services contained in each ensemble with each other;

wherein at least one of said search operation and said preset operation is performed, based on a ~~compared~~the comparison result by said reception level comparing part, while a higher priority for the operation being assigned to one or more services belonging to an ensemble

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 09/901,563

containing a service with a higher reception level, than one or more services belonging to an ensemble containing a service with a lower reception level.

7. (currently amended): A digital broadcast receiving apparatus according to claim 5, wherein said reception level detecting part detects a reception level of at least one of said services contained in each of said ensembles-~~containing a receivable service~~.

8. (currently amended): A digital broadcast receiving apparatus according to claim 6, wherein said reception level detecting part detects a reception level of at least one of said services contained in each of said ensembles-~~containing a receivable service~~.
